

PRESS RELEASE

January 2012

Looking for a smooth transition to LPG? AvantiGas Leads the Way

It's cleaner, greener and offers significant savings to businesses, and now the transition to LPG fuel has become a great deal easier, thanks to AvantiGas' dedicated team of specialists, on hand to make the switchover simpler than ever.

As the cost of conventional fuel escalates and emission reduction becomes top of the global agenda many businesses have, no doubt, played with the idea of converting to LPG – according to the experts LPG has one of the lowest levels of carbon emissions, poses no pollution threat to soil and water and burns cleaner with few emissions (compared to other fossil fuels).

The job of converting to LPG can be daunting to industries familiar and comfortable with traditional fuels - something which has created one of the biggest barriers to change.

However, the process is a lot easier than many would expect, with fuel suppliers AvantiGas now offering the necessary infrastructure and expert support to make LPG a viable and easy alternative for all.

AvantiGas was acquired from Shell by the UGI Corporation; one of the world's largest LPG marketers mostly focused in the USA and Europe, marketing under several well known local brands in each market. Leading the way as part of one of the largest LPG providers in the world, AvantiGas is now able to draw on global expertise to offer its customers professional, local solutions to meet businesses needs.

With an experienced team of LPG specialists, AvantiGas provides reliable, expert service, through dedicated account managers, always on hand to offer a consistent point of contact, and steady supply.

Gavin Morris, B2B Sales Manager at AvantiGas, says: "There are so many benefits to using LPG. It's cost-effective, clean and helps increase productivity. We are looking to drive the business forward throughout 2012 - employing new team members to help us continue to provide the high level of service we pride ourselves on, and support future growth of the organisation."

AvantiGas has recently introduced a telemetry system which wirelessly monitors customers' levels of fuel, enabling firms to replenish LPG levels well before the current supply runs out. This consistent supply of energy ensures greater productivity for customers – essential for those who depend on LPG to operate.

With a myriad of benefits, LPG from AvantiGas is proving one of the most versatile available. With a high level of customer service, combined with the numerous benefits of LPG gas, it is not surprising that more and more businesses are switching to LPG with AvantiGas. Such growth means the future for AvantiGas is looking bright with plans to recruit even more team members in 2012 to keep up with the growing popularity of LPG and to continue and build on the exceptional level of customer service currently provided.

Notes to editors

About UGI

UGI is a distributor and marketer of energy products and services. Through subsidiaries, UGI operates natural gas and electric utilities in Pennsylvania, distributes propane both domestically and internationally, manages midstream energy and electric generation assets in Pennsylvania, and engages in energy marketing in the Mid-Atlantic region.

About AvantiGas

AvantiGas (www.avantigas.com) are passionate about energy and their customers. They provide LPG for homes and businesses throughout the UK and pride themselves in providing a cleaner burning fuel. Through their expertise and advanced technology, they continually strive to deliver better, safer and more reliable ways to meet energy needs.

Liquefied Petroleum Gas, or LPG (propane, butane and mixes of the two) is produced from both the oil refining and natural gas extraction processes and is a very versatile form of energy that is used for a wide array of applications in businesses and around the home. Just some of the uses of LPG include cooking, heating and outdoor applications such as BBQ's and for heating swimming pools. LPG can also be used in Aerosols, for crop drying, emergency generators, air conditioning, to fuel FLT's, as an alternative fuel for vehicle fleets and much more.

AvantiGas is part of the UGI group who are a global energy corporation based in the US. UGI are a distributor and marketer of energy products and services including LPG (propane, butane), natural gas and electricity. AvantiGas is a subsidiary of UGI providing bulk LPG to the UK. While the AvantiGas brand was launched in 2011, the company has delivered reliable and safe LPG products and services since the 1960's under the name of Shell. Their forward thinking, high service levels, safety standards and quality products are why people choose AvantiGas.
